

Energy Savings is easy with the Intermatic Water Heater Timers...

Electric water heaters are one of the largest energy users in the home. By installing a timer and programming the water heater to stay off during the On-Peak hours, a member can see savings without noticing a difference. A timer with battery back-up is a good choice because if the power goes out you don't have to reprogram the timer. Intermatic water heater timers provide to-the-minute control and can be scheduled for operation during the lowest time-of-day rates.

The Intermatic EH-40 is a device that has battery back-up and is designed to work with standard electric water heaters. This model will handle up to 7200 watts of power at 240 volts.

Features of the EH40 Water Heater Timer include:

- 6 ON/OFF events can be performed daily or weekly
- External override switch
- LED Load Indicator
- Battery carryover protects time keeping and program information for a minimum of 3 years
